Fusion

The aim at Happy Feet Pedorthics the goal is correct length, width, and depth for the feet; and for the fitting to be appropriate for the activity. Up hill and down dale on a walk, or running on the treadmill at the gym – the feet can push forward, become sweaty, and a little swollen! We watch out for your feet!

Surge

Sometimes clients feel the sport shoe moving up and down at the heel a little, or pressure from lacing on the top of the foot. At Happy Feet Pedorthics we advise on different forms of lacing to assist with this.

Why have a rocker bottomed shoe? To ease pain particularly when you have limited range of movement with your toes or ankle. Rocker soles provide the opportunity to roll through in your gait, giving more comfort and ease of mobility!

When you come to Happy Feet Pedorthics we fit you with shoes made on different lasts. The aim is for a match between the dimensions of your feet with that of the last - possibly with some further fitting devices along the way!

At Happy Feet Pedorthics: we can add a bowls sole to shoes which fit your feet
